

Pages & Petals Bookstore – Usability and Accessibility Report

Student Name: Aaron Conteh 24837256

Introduction

This report explains the usability and accessibility features I added to my website, *Pages & Petals Bookstore*. The aim was to follow the guidance from Lecture 4b: Web Usability and Accessibility, which highlighted the importance of clear navigation, readable text, responsive design, and support for users with different needs. The points below describe the features I implemented and how they improve the user experience.

Usability and Accessibility Checklist

1. Clear Navigation Menu

My site uses a simple navigation bar and a slide-out menu on mobile. This was done because as it mentions Lecture 4b that good page structure and clear navigation help users find what they need quickly. This improves usability because users can move between pages without confusion.

2. High Contrast and Readable Fonts

I used dark text on a light background and readable fonts. The reason for this is because the lecture explains that text size, spacing, and typeface affect readability, especially for users with visual difficulties. This makes the content easier to read for everyone.

3. Responsive Layout for Different Devices

The layout adjusts automatically on smaller screens using media queries. Lecture 4b talks about responsive design and how users often switch between devices. This makes the site accessible on phones, tablets, and desktops without zooming or scrolling sideways.

4. Payment Page

The payment page checks the card number, expiry date, and CVV before sending data. This follows the lecture's point about good usability reducing user errors. It helps guide users to enter correct information and prevents failed submissions.

5. Keyboard-Friendly Focus Indicators

Buttons, links, and form inputs show a visible outline when selected. Lecture 4b explains that accessibility supports users with motor difficulties or those who rely on keyboard navigation. The focus outlines make it easier for these users to move around the site.

Conclusion

The features above were added to improve both usability and accessibility, following the guidance from Lecture 4b. They help ensure that the website is easy to navigate, readable, and functional for a wide range of users. Overall, these improvements create a more inclusive and user-friendly experience.
